1. How to use this template

This template captures the Data Management Record for an AI system delivered or operated by Kainos. It records the data sources used by the system (training, fine-tuning, retrieval, runtime, evaluation), their sensitivity and provenance, quality controls, and handling rules. It is one of the four mandatory artefacts and supports **control C2**.

Complete all applicable sections. Where Kainos acts as a Data Processor, information relating to lawful basis, data subject rights, retention decisions, and privacy obligations may be referenced from customer-provided documentation or contractual arrangements rather than being defined by the project team. Where personal data is in scope, reference the relevant DPIA or customer privacy assessment.

1.1 System Identity

Field	Value
AI System Name	[Enter system name]
OneTrust Assessment	[OneTrust Assessment ID]
Risk Tier	[Tier 2 Medium / Tier 3 High]
Customer (if applicable)	[Enter customer name]
Data Governance Role	[Controller / Joint Controller / Processor]
Data Controller	[If not Kainos]
Monitoring Owner	[Customer / Kainos / Shared]
Accountable Owner	[Name, role]
Approver	[Name, role - for Tier 2/3 not the Owner]
Reviewer(s)	[Security / Data Ethics / QA / Legal as required]
Lifecycle Stage	[Discover / Design / Develop / Deploy & Operate]
Version	[x.y]
Date	[dd.mm.yy]
Status	[Draft / Approved / Superseded]

1.2 Summary

Key points to capture in this artefact:

- Every data source the system uses, with role and sensitivity.
- Provenance and licensing for each data set, including third-party data.
- Quality measures and known data issues.
- Handling rules: lawful basis, retention, location, encryption, sub-processors.
- Data subject rights and links to any DPIA.
- Triggers for refresh and review.

Controller / Processor Consideration

For customer delivery engagements, Kainos will often act as a Data Processor. In these circumstances, the customer remains responsible for determining the lawful basis for processing, retention requirements, data subject rights obligations, privacy notices, and

any DPIA requirements. This record should document those obligations, where known, and identify how Kainos fulfils its processor responsibilities.

2. Data Sources

List every data set that the system consumes, produces, or stores. Include training and fine-tuning data, retrieval corpora, runtime inputs and outputs, evaluation sets, and operational logs.

Ref	Data set	Use	Owner	Source / system
D1	[Data set name]	[Training / Fine-tuning / Retrieval / Runtime / Eval / Logs]	[Owner]	[System / vendor]
D2	[]	[]	[]	[]
D3	[]	[]	[]	[]
D4	[Add rows as needed]			

3. Data Categories and Sensitivity

Classify each data set for sensitivity. Flag personal data, special-category personal data (Article 9 UK GDPR), commercially sensitive data, and any export-controlled material.

Ref	Personal data?	Special category?	Confidential / IP?	Other regulated?
D1	[Yes / No]	[Yes / No]	[Yes / No]	[Yes / No - detail]
D2	[]	[]	[]	[]
D3	[]	[]	[]	[]
D4	[]	[]	[]	[]

4. Provenance and Licensing

Record where each data set came from, the licence or contract under which it is used, and any restrictions. ISO/IEC 42001 expects clear provenance for AI data.

Ref	Provenance	Licence / contract	Restrictions / acceptable use
D1	[Origin, collection method, date range]	[Licence / contract ref]	[Restrictions]
D2	[]	[]	[]
D3	[]	[]	[]
D4	[]	[]	[]

5. Data Quality

Describe the quality checks applied to each data set and any known quality issues, including representativeness for the intended population and any gaps relating to demographic groups, languages, regions, accessibility needs, behaviours, cultures, or lived experiences.

Ref	Quality measures	Known issues	Mitigations
D1	[Completeness, accuracy, freshness, balance]	[Known gaps or biases]	[How addressed]
D2	[]	[]	[]
D3	[]	[]	[]
D4	[]	[]	[]

5.1 Data Preparation (A.7.6)

Document the steps applied to source data before it is used for training, fine-tuning, retrieval, or inference. Tier 2 and Tier 3 must complete the table. Reproducibility is the test: a competent reviewer should be able to recreate the prepared dataset from the steps below.

Preparation activity	Applied? (Y/N/NA)	Tooling / method	Owner	Reproducibility evidence
Cleaning (deduplication, null handling, outlier removal)	[Y/N/NA]	[e.g. pandas, dbt model]	[Owner]	[Script / notebook reference]
Labelling (manual, programmatic, weak supervision)	[Y/N/NA]	[e.g. annotation tool, label schema]	[Owner]	[Label-guide reference; inter-annotator agreement]
Augmentation (synthetic data, back-translation, oversampling)	[Y/N/NA]	[Method]	[Owner]	[Configuration; seed]
Transformation (tokenisation, embedding, normalisation, feature engineering)	[Y/N/NA]	[Pipeline component]	[Owner]	[Pipeline definition; version]
Splitting (train / validation / test; stratification)	[Y/N/NA]	[Method; ratio]	[Owner]	[Seed; manifest of IDs per split]
Bias / fairness pre-processing (rebalancing, reweighting)	[Y/N/NA]	[Method]	[Owner]	[Pre/post metrics; linked to risk row]
PII / sensitive-attribute handling (redaction, pseudonymisation)	[Y/N/NA]	[Method]	[Owner]	[Inventory of attributes handled]

6. Handling Rules

Specify the operational rules for each data set: lawful basis (if personal data), where stored, encryption, retention, access control, and any cross-border transfer arrangements.

Where Kainos acts as a Data Processor, document customer-defined requirements and contractual obligations rather than redefining controller decisions.

Ref	Lawful basis (if personal)	Storage location / region	Encryption at rest / in transit	Retention period	Access control
D1	[Article 6 / Article 9 basis]	[Region, tenancy]	[AES-256 / TLS 1.2+]	[N days/months]	[Roles]
D2	[]	[]	[]	[]	[]
D3	[]	[]	[]	[]	[]
D4	[]	[]	[]	[]	[]

7. Sub-processors and Third Parties

Identify every sub-processor that handles data on behalf of the system, the data they touch, the contractual safeguards in place, and the location of processing.

Sub-processor	Service provided	Data handled	Location	Contractual safeguards
[Vendor name]	[Service]	[Data refs]	[Region]	[DPA / SCC / equivalent]
[]	[]	[]	[]	[]
[]	[]	[]	[]	[]

7.1 Sub-processor Responsibility Split

For each sub-processor or third-party AI service named above, record the split of responsibilities, the change-notification commitment, and the exit / data-return arrangement. This complements the Sub-processors and Third Parties table by capturing the contractual safeguards required by ISO/IEC 42001.

Sub-processor / service	Kainos accountable for	Customer accountable for	Supplier accountable for	Change-notification commitment	Exit / data-return arrangement
[Service name]	[e.g. prompt design, input classification, output review]	[e.g. lawful basis, retention, privacy notice, DSAR handling]	[e.g. base model, hosting, patching, sub-processors]	[e.g. 30 days for model change, region change, sub-processor change]	[e.g. data export format, retention window, deletion confirmation]
[Service name]	[...]		[...]	[...]	[...]
[Add rows as needed]					

8. Data Subject Rights and Privacy

Record how data subject rights are supported and link to the DPIA where personal data is in scope. If no personal data is in scope, mark as Not Applicable.

Aspect	Detail
Personal data in scope?	[Yes / No]
Data Controller	[Customer / Kainos]
Kainos Role	[Controller / Joint Controller / Processor]
DPIA Reference	[Link]
DSAR Handling Responsibility	[Customer / Kainos]
Erasure Request Responsibility	[Customer / Kainos]

9. Refresh and Review Triggers

State when data sets will be refreshed, reviewed, or retired. Drift in input data is a common trigger for retraining.

Trigger	Action	Owner
Scheduled refresh	[Cadence per data set]	[Customer / Kainos]
Quality degradation	[Threshold; action]	[Customer / Kainos]
Source change / outage	[Action; backup source]	[Customer / Kainos]
Regulatory change	[Action]	[Customer / Kainos]

10. Change History

Version	Date	Author	Change
[1.0]	[dd.mm.yy]	[Name]	[Initial issue.]
